Neonatal
Nurses

Raise standards, together.

After completion of our highly successful iNICQ Universal Training focused on Neonatal Abstinence Syndrome (NAS), VON is now continuing the quest to improve care for substance-exposed infants and families, through the launch of two new resources.

NAS UNIVERSAL TRAINING PROGRAM

Providing high-reliability neonatal care requires developing standardized clinical processes and universal training programs. VON's Universal Training Program is presented by 35 world-class NAS experts and is available online 24/7. These resources include:

- 18 Micro-Lessons relevant to every care team member, with CME/CNE.
- A VON NAS Quality Improvement Toolkit.
- A 5-chapter *Virtual Video Visit and Facilitators Guide*, highlighting a center of excellence in NAS care and their trauma-informed approach.
- Sample policies, procedures, guidelines and family educational tools essential for NAS Care.
- Over 100 NAS-related quality improvement stories, and data—showing real-world examples of measurable improvement in length of stay, length of treatment and cost.

"Our paper, published in Pediatrics in 2016, reported that participating VON iNICQ centers reduced hospital length of stay by 2 days. If scaled nationally we estimate potential savings in hospital charges of \$170 million dollars."

NAS STATEWIDE IMPLEMENTATION PACKAGE

The NAS Universal Training Program is now available to Statewide Perinatal Quality Improvement Collaboratives, health systems, and health centers, enabling these organizations to dramatically improve their patient outcomes on a system-wide basis, while reducing both the length of stay and the number of infants who are discharged on medication for NAS.

States and/or health systems may also elect to employ VON Day Quality Audits to measure ongoing improvement.
